                                                                                                                                                                                                                                                            TOPOLOGY: linear

MOLECULE TYPE: other nucleic acid

HYPOTHETICAL: no

ANTI-SENSE: no

ORIGINAL SOURCE: Combination of avian or HIV-1 retrovirus

ORIGINAL SOURCE: Same as in 2,vi.

FRATURE:
OTHER INFORMATION: The sequence is the bottom strand of

OTHER INFORMATION: M-2 U5 and the pGEM target of the middle clone shown in

US-08-671-071B-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         t¥0

Patent No. 614685

GENERAL INFORMATION:
APPLICANT: Williams, Keith L
APPLICANT: Veal, Duncan
APPLICANT: Veal, Matthias
TITLE OF INVENTION: Cryptosporidium parvum Cells
NUMBER OF SEQUENCES: 4
CORRESPONDENCES: 4
CORPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATION SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.24
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/952,376
FILING DATE: G-MAY-1996
ATTORNEY/ABENT INFORMATION:
NAME: Martin, Alice
INFORMATION POR SEQ ID NO: 3:
SEQUENCE CHARACTERIFFICS:
LENGTH: 15 base pairs
TYPE: mucleic acid
STRANDENESS: single

Sequence 30, Application US/09580794C

Sequence 30, Application US/09580794C

Patent No. 6331389

GENERAL INFORMATION:

APPLICANT: Stuyver, Lieven

APPLICANT: Louwagie, Joost

APPLICANT: Louwagie, Joost

TITLE OF INVENTION: METHOD FOR DETECTION OF DRUG-INDUCED MUTATIONS IN THE REVERSE

TITLE OF INVENTION: TRANSCRIPTASE GENE

FILE REFERENCE: INNS008--2

CURRENT PILING DATE: 2000-05-30

CURRENT PILING DATE: 2000-05-30

FRICK APPLICATION NUMBER: 08/913,833 now US/6,087,093

PRIOR PILING DATE: 1997-09-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-253-977-4

Patent No. 6372430

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic Acids for Detecting Aspergillus Species and
TITLE OF INVENTION: Other Filamentous Fungi
TITLE OF INVENTION: Other Filamentous Fungi
CURRENT APPLICATION NUMBER: US/09/423,233
CURRENT FILING DATE: 2000-06-27
NUMBER OF SEQ ID NOS: 61
SEQ ID NO 40
LENGTH: 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-081-646-575

US-09-081-646-575

Sequence 575, Application US/09081646

Patent No. 6333152

GENERAL INFORMATION:

APPLICANT: Kinzler, Kenneth

APPLICANT: Stang, Lin

APPLICANT: Zhang, Lin

APPLICANT: APPLICANT: APICON Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Geneer Cells

FILE REFERENCE: 01107.74664

CURRENT APPLICATION NUMBER: US/09/081,646

CURRENT PILING DATE: 1998-05-20

EARLIER PILING DATE: 1998-05-21

NUMBER OF SEQ ID NOS: 871

SOFTWARE: FastSEQ for Windows Version 3.0

J Sequence 36, Application US/08501968

Patent No. 598562

GENERAL INFORMATION:

APPLICANT: Revin Anderson and Lex Cowsert

TITLE OF INVENTION: Antisense Inhibition of Hepatitis B

TITLE OF INVENTION: Virus Replication

NUMBER OF SEQUENCES:

ADDRESSE: Jane Massey Licata, Esq.

STREET: 210 Lake Drive East, Suite 201

CITY: Cherry Hill

STATE: NJ

CONTRY: USA
                                                                                                                                                                                                                                                    Score 11.4; DB 1; Length 16;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6, Application US/08551275
Sequence 6, Application US/08551275
Patent No. 5679551
GENERAL INFORMATION:
APPLICANT: Alderete, John F.
TITLE OF INVENTION: with the Trichomonae Vaginalie Virus
NUMBER OF SECUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: TX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 11.4; DB 1; Length 16;
Pred. No. 4.3e+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1; Indels

J Sequence 27, Application US/08913441B

Patent No. 6162612

GENERAL INFORMATION:

APPLICANT GIOTGANO.

TITLE OF INVENTION: No. 6162612el Human Cyclin-Dependent Kinase-Like Proteins and TITLE OF INVENTION: Methods of Using The Same
TITLE OF INVENTION: Methods of Using The Same
TITLE OF INVENTION: Methods of Using The Same
TITLE OF INVENTION: NO. 6162612el Human Cyclin-Dependent Kinase-Like Proteins and TITLE OF INVENTION: Methods of Using The Same
CURRENT FILING DATE: 1997-12-02

PRIOR APPLICATION NUMBER: 1997-12-02

PRIOR APPLICATION NUMBER: PCT/US96/03557

PRIOR APPLICATION NUMBER: PCT/US96/03557

PRIOR PILING DATE: 1996-03-14

NUMBER OF SEQ ID NOS: 31

SEQ ID NO 27

LENTH: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ; OTHER INFORMATION: Description of Artificial Sequence: Primer US-08-913-441B-27

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                       Sequence 87, Application US/08483211A
Patent No. 6309853
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL THE ROCKEFELLER UNIVERSITY
TITLE OF INVENTION: WOLLIATORS OF BODY WEIGHT, CORRESPONDING
TITLE OF INVENTION: WOLLIATORS OF BODY WEIGHT, CORRESPONDING
TITLE OF INVENTION: USES THEREOF
NUMBER OF SEQUENCES: 98
CORRESPONDENCE ADDRESS:
ADDRESSEE: Klauber & Jackson
STREET: 411 Hackensack Avenue
CITY: Hackensack
STREET: Waw Jersey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 0.9%; Score 11.4; DB 1; Length 16; Best Local Similarity 92.3%; Pred. No. 4.3e+02; Matches 12; Conservative 0; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CUMPUTER READABLE FORM:
MEDIDIM TYPE Ploppy disk
OCMEDITAR: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOCTWARE: BREADIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/483,211A
FILING DATE: 07-JUN-1995
CLASSIFICATION NUMBER: 08/486,943
FILING DATE: MAY 10, 1995
APPLICATION NUMBER: 08/486,431
FILING DATE: MAY 10, 1995
APPLICATION NUMBER: 08/347,563
APPLICATION NUMBER: 08/347,563
APPLICATION NUMBER: 08/347,563
APPLICATION NUMBER: 08/347,563
APPLICATION NUMBER: 17, 1994
CLASSIFICATION S14
PRIOR APPLICATION NUMBER: 60-1-087 CIP21
FILING DATE: August 17, 1994
CLASSIFICATION: 514
ATTORNEY/AGENT INFORMATION:
NAME: Jackson Esq., David A.
REGISTRATION NUMBER: 600-1-087 CIP21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 668

Sequence 87, Application US/08488225A

Sequence 87, Application US/08488225A

Sequence 87, Application US/08488225A

Patent No. 6471366

GENERAL INFORMATION:

APPLICATION: WOULDLYCRES OF BODY WEIGHT, CORRESPONDING

TITLE OF INVENTION: WUCLEIC ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC USE

NUMBER OF SEQUENCES: 98

CONRESSED KI auber & Jackson

STREET: All Hackensack

CIT': Hackensack

STREET: ALL Hackensack

CONFUREX: Usw Jersey

CONFUREX: BAD POSTION

MEDIUM TYPE: Ploppy disk

COMPUTER: IBMP COMPATIEN: DSS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: Uss/08/488,225A

FILING DATE: June 7, 1995

CLASSIFTCATION: A35

PRIOR APPLICATION DATA:

PRIING DATE: June 7, 1995

FILING DATE: June 7, 1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-UB-242-402-7/C

Sequence 7, Application US/08242402

Patent No. 5580967

GENERAL INFORMATION:

TITLE OF INVENTION: OPTIMIZED CATALYTIC DNA-CLEAVING

TITLE OF INVENTION: OPTIMIZED CATALYTIC DNA-CLEAVING

TITLE OF SEQUENCES: 26

CORRESPONDENCE ADDRESS:

ADDRESSEE: THE SCRIPPS RESEARCH INSTITUTE, OFFICE OF

ADDRESSEE: 10666 NORTH TORREY PINES ROAD, TPC 8

CITY: LA JOLLA

STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COMPUTER: IBM PC compatible

Sequence 1. Application US/08534454

Patent No. 5849486

GENERAL INPORMATION:
APPLICANT: Heller, Michael J.; O'Connell, James P.; Juncosa, Robert D.; Sosno; TITLE OF INVENTION: APPRATUS AND METHODS FOR ACTIVE TITLE OF INVENTION: PROGRAMMABLE MATRIX DEVICES
NUMBER OF SEQUENCES: 2
CORRESONDENCES: 2
CORRESONDENCES: ADDRESSE:
ADDRESSEE: Lyon & Lyon
STREET: 603 West Fifth Street
CITY: Los Angeles
STATE: California
COUNTRY: USA
ZIP: 90071
                                                                                                                                                                                                                                                                                                                                                                                                                                                         0.9%; Score 11.2; DB 1; Length 17;
